

BOTCALM (PVT) LTD.

Developer Internship Assessment Submission

Project: Pluto Token (T00059)

Candidate Name: Jayashan Nawarathne
Date: June 11, 2026

Project Overview

This document serves as the formal submission for the Botcalm Developer Internship Assessment. The objective of this assessment was to convert a professional UI design into a modern, responsive web application while strictly adhering to industry best practices, responsive design principles, and component-based architecture.

Resources & Links

- **Selected Figma Design:** [Pluto - T00059](#)
- **GitHub Repository:** <https://github.com/Jayashan00/pluto-app.git>
- **Live Deployment (Vercel):** <https://pluto-app-lemon.vercel.app>

Implementation Details

The application was developed with a strong focus on high UI fidelity, code maintainability, and exceptional user experience.

Technology Stack

- **Framework:** Next.js & React.js
- **Styling:** Tailwind CSS
- **Interactions:** Framer Motion

Key Features & Bonus Additions

In addition to meeting the core requirements, several enhancements were implemented to address the assessment's "Bonus Considerations":

- **Meaningful Animations & Interactions (Bonus):** Integrated *Framer Motion* to provide physics-based, continuous floating animations for the astronauts and planets, simulating a zero-gravity space environment. Added smooth scroll-reveal effects and tactile hover states for interactive elements.
- **Responsive Design Consistency:** Built a fully fluid grid layout that perfectly scales across Mobile, Tablet, and Desktop resolutions without visual breakage or overlapping errors.
- **UI Accuracy & Design Fidelity:** Meticulously matched custom typography (*Gloomie Saturday* and *Marhey*), specific brand colors, and complex layered background images (glassmorphism/opacity layers) exactly as they appear in the original Figma mockup.
- **Code Quality & Architecture:** Utilized unified CSS grid structures over fragile layout hacks (like negative margins) to ensure a scalable, clean, and easily maintainable component architecture.
